Title: Innovative applications in smart cities / editors, Alberto

Ochoa-Zezzatti, Universidad Ciudad Juárez, México, Genovera Vargas-Solar, French Council of Scientific Research (CNRS), Laboratory of Informatics on Images and Information Systems, Cedex, France, Javier Alfonso Espinosa Oviedo, University of Lyon, ERIC Research Lab, Cedex, France.

Description: First edition. | Boca Raton : CRC Press, Taylor & Francis Group, 2021. | "A science publishers book." | Includes bibliographical references and index. | Summary: "This research book is a novel, innovative and adequate reference that compiles interdisciplinary perspectives about diverse issues related with Industry 4.0 and Smart Cities on different ways about Intelligent Optimisation, Industrial Applications on the real world, Social applications and Technology applications with a different perspective about existing solutions. Chapters report research results improving Optimisation related with Smart Manufacturing, Logistics of products and services, Optimisation of different elements in the time and location, Social Applications to enjoy our life of a better way and Applications that increase Daily Life Quality. This book is organised into three scopes of knowledge: (1) applications of Industry 4.0; (2) applications to improve the life of the citizens in a Smart City; and finally (3) research associated with the welfare of the working-age population and their expectations in their jobs correlated with the welfare - work relationship"-- Provided by publisher.

Preface

“Innovation” is a moto in the development of current and future Smart Cities. Innovation understood by newness, improvement and spread, is often promoted by Information and Communication Technologies (ICTs) that make it possible to automate, accelerate and change the perspective of the way economy and “social good” challenges can be addressed.

In economics, innovation is generally considered to be the result of a process that brings together various novel ideas to affect society and increase competitiveness. In this sense, future Smart Cities societies’ economic competitiveness is defined as increasing consumers’ satisfaction given by the right products price/quality ratio. Therefore, it is necessary to design production workflows that maximise the resources used to produce the right quality products and services. Companies’ competitiveness refers to their capacity to produce goods and services efficiently (decreasing prices and increasing quality), making their products attractive in global markets. Thus, it is necessary to achieve high productivity levels that increase profitability and generate revenue. Beyond the importance of stable macroeconomic environments that can promote confidence, attract capital and technology, a necessary condition to build competitive societies is to create virtuous creativity circles that can propose smart and disruptive applications and services that can spread across different social sectors strata.

Smart Cities have been willing to create technology-supported environments to make urban, social and industrial spaces friendly, competitive and productive contexts in which natural and material resources can be accessible to people, where citizens can develop their potential skills in the best conditions possible. Since countries in different geographic locations, natural, cultural and industrial ecosystems have to adapt their strategies to these conditions, Smart Cities solutions are materialised differently. This book shows samples of experiences where industrial, urban planning, health and sanitary problems are addressed with technology leading to disruptive data and artificial intelligence centred applications. Sharing applied research experiences and results mostly applied in Latin American countries, authors and editors show how they contribute to making cities and new societies smart through scientific development and innovation.

Contents

<i>Preface</i>	iii
<i>Prologue</i> <i>Khalid Belhajjame</i>	vii

Part I: Daily Life in a Smart City

1. Segmentation of Mammogram masses for Smart Cities Health Systems	1
<i>Paula Andrea Gutiérrez-Salgado, Jose Mejia, Leticia Ortega, Nelly Gordillo, Boris Mederos and Alberto Ochoa-Zezzatti</i>	
2. Serious Game for Caloric Burning in Morbidly Obese Children	10
<i>José Díaz-Román, Alberto Ochoa-Zezzatti, Jose Mejía-Muñoz, Juan Cota-Ruiz and Erika Severeyn</i>	
3. Intelligent Application for the Selection of the Best Fresh Product According to its Presentation and the Threshold of Colors Associated with its Freshness in a Comparison of Issues of a Counter in a Shop of Healthy Products in a Smart City	22
<i>Iván Rebollar-Xochicale, Fernando Maldonado-Azpeitia and Alberto Ochoa-Zezzatti</i>	
4. Analysis of Mental Workload on Bus Drivers in the Metropolitan Area of Querétaro and its Comparison with three other Societies to Improve the Life in a Smart City	34
<i>Aarón Zárate, Alberto Ochoa-Zezzatti, Fernando Maldonado and Juan Hernández</i>	
5. Multicriteria analysis of Mobile Clinical Dashboards for the Monitoring of Type II Diabetes in a Smart City	47
<i>Mariana Vázquez-Avalos, Alberto Ochoa-Zezzatti and Mayra Elizondo-Cortés</i>	
6. Electronic Color Blindness Diagnosis for the Detection and Awareness of Color Blindness in Children Using Images with Modified Figures from the Ishihara Test	75
<i>Martín Montes, Alejandro Padilla, Julio Ponce, Juana Canul, Alberto Ochoa-Zezzatti and Miguel Meza</i>	
7. An Archetype of Cognitive Innovation as Support for the Development of Cognitive Solutions in Smart Cities	89
<i>Jorge Rodas-Osollo, Karla Olmos-Sánchez, Enrique Portillo-Pizaña, Andrea Martínez-Pérez and Boanerges Alemán-Meza</i>	

Part II: Applications to Improve a Smart City

8. From Data Harvesting to Querying for Making Urban Territories Smart	107
<i>Genoveva Vargas-Solar, Ana-Sagrario Castillo-Camporro, José Luis Zechinelli-Martini and Javier A. Espinosa-Oviedo</i>	

9. Utilization of Detection Tools in a Human Avalanche that Occurred in a Rugby Stadium, Using Multi-Agent Systems	117
<i>Tomás Limones, Carmen Reaiche and Alberto Ochoa-Zezzatti</i>	
10. Humanitarian Logistics and the Problem of Floods in a Smart City	135
<i>Azlán Bastarrachea-Almodóvar, Quirino Estrada Barbosa, Elva Lilia Reynoso Jardón and Javier Molina Salazar</i>	
11. Simulating Crowds at a College School in Juarez, Mexico: A Humanitarian Logistics Approach	145
<i>Dora Ivette Rivero-Caraveo, Jaqueline Ortiz-Velez and Irving Bruno López-Santos</i>	
12. Perspectives of State Management in Smart Cities	155
<i>Zhang Jieqiong and Jesús García-Mancha</i>	
Part III: Industry 4.0, Logistics 4.0 and Smart Manufacturing	
13. On the Order Picking Policies in Warehouses: Algorithms and their Behavior	165
<i>Ricardo Arriola, Fernando Ramos, Gilberto Rivera, Rogelio Florencia, Vicente Garcia and Patricia Sánchez-Solis</i>	
14. Color, Value and Type Koi Variant in Aquaculture Industry Economic Model with Tank's Measurement Underwater using ANNs	186
<i>Alberto Ochoa-Zezzatti, Martin Montes Rivera and Roberto Contreras Masse</i>	
15. Evaluation of a Theoretical Model for the Measurement of Technological Competencies in the Industry 4.0	203
<i>Norma Candolfi-Arballo, Bernabé Rodríguez-Tapia, Patricia Avitia-Carlos, Yuridia Vega and Alfredo Hualde-Alfaro</i>	
16. Myoelectric Systems in the Era of Artificial Intelligence and Big Data	216
<i>Bernabé Rodríguez-Tapia, Angel Israel Soto Marrufo, Juan Miguel Colores-Vargas and Alberto Ochoa-Zezzatti</i>	
17. Implementation of an Intelligent Model based on Big Data and Decision Making using Fuzzy Logic Type-2 for the Car Assembly Industry in an Industrial Estate in Northern Mexico	229
<i>José Luis Peinado Portillo, Alberto Ochoa-Zezzatti, Sara Paiva and Darwin Young</i>	
18. Weibull Reliability Method for Several Fields Based Only on the Modeled Quadratic Form	235
<i>Manuel R. Piña-Monarrez and Paulo Sampaio</i>	
Index	267
