**Welcome Mohamed M. Awad,**

Please take this opportunity to view and correct the proof of your chapter before publication

Be aware that it is not allowed to rewrite or introduce new content at this stage and making a significant number of new corrections will have to be reviewed by Elsevier staff.

Click "PROCEED" to continue with the proof. Please turn off pop-up blockers for access to the full proofing interface.

**PROCEED****Quick Start****Authors' Names**

Check that the authors' last names (highlighted in teal) have been identified correctly. Make corrections as needed using the edit option.

**Copyeditor Changes**

The grey highlights you see in the proof are copyeditor changes. If inappropriate, you can reject them.

**Queries**

These are the queries from the production team. Review and resolve all queries. Corrections cannot be submitted until all queries have been resolved.

**Layout**

View the repaginated chapter with your changes incorporated by clicking Proof. The Proof view will show your text edits, but not any instructions, attachments, or query responses (these will be addressed in the final publication).

Please also note that the formatting and layout of the Proof will differ from those of the final published product, although the data are the same.

**Editing**

- Edit text with a familiar word processor
- Place comment on graphics, or replace graphics
- Edit tables - row, column or cell
- Edit equations in WYSIWYG or LaTeX mode
- Edit references, funding information and author information

**Collaboration**

Invite collaborators to check and edit the proof. Note that to avoid overlapping corrections, only one person will be able to work on the proof at any given time.

**Graphics**

Annotate the graphics if any change is required, and we will edit or replace them as instructed.

**High-resolution Images**

You can also view the high-resolution version of the image. High-resolution version will be used in the final publication.

# Synthetic Biodegradable Polymers as Adsorbents of Dyes

<b>Introduction</b>	<b>3</b>
Overview of the Importance of Dyes and Their Environmental Impact	3
Motivation for Using Synthetic Biodegradable Polymers as Adsorbents	4
Environmental Sustainability	4
Renewable Resources	4
Tailored Properties	4
Compatibility with Wastewater Treatment Systems	4
<b>Synthetic Biodegradable Polymers</b>	<b>5</b>
Definition and Characteristics of Synthetic Biodegradable Polymers	5
Biodegradability	5
Environmental Compatibility	5
Tunable Properties	5
Versatility	5
Overview of Commonly Used Synthetic Biodegradable Polymers	6
Polylactic Acid (PLA)	6
Polyhydroxyalkanoates (PHAs)	6
Poly $\epsilon$ -Caprolactone (PCL)	7
Poly Butylene Succinate (PBS)	7
Poly Lactic- <i>co</i> -Glycolic Acid (PLGA)	7
<b>Dye Adsorption Mechanisms</b>	<b>7</b>
Explanation of the Different Mechanisms Involved in Dye Adsorption by Polymers	7
Physical Adsorption	7
Chemical Adsorption	8
Ion Exchange	8
Adsorption Processes: Physical and Chemical Interactions	8
<b>Types of Dyes Adsorbed</b>	<b>9</b>
Classification of Dyes Based on Their Chemical Structure and Properties	9
Azo Dyes	9
Anthraquinone Dyes	9
Reactive Dyes	9
Acid Dyes	9
Basic Dyes	10
Different Types of Dyes Adsorbed by Synthetic Biodegradable Polymers	10
Disperse Dyes	10
Direct Dyes	10
Vat Dyes	10
<b>Polymer-Dye Interactions</b>	<b>11</b>
Analysis of the Factors Influencing Polymer-Dye Interactions	11
Polymer Properties	11
Dye Characteristics	11
Solution Conditions	11
Adsorption Kinetics and Thermodynamics	11
Influence of Polymer Properties on Dye Adsorption Capacity and Efficiency	12
Surface Area and Porosity	12
Chemical Composition and Functional Groups	12
Surface Charge	12
Hydrophobicity	12
