Welcome Mohamed M. Awad,

Please take this opportunity to view and correct the proof of your chapter before publication

Be aware that it is not allowed to rewrite or introduce new content at this stage and making a significant number of new corrections will have to be reviewed by Elsevier staff.

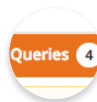

Click "PROCEED" to continue with the proof. Please turn off pop-up blockers for access to the full proofing interface.

PROCEED**Quick Start****Authors' Names**

Check that the authors' last names (highlighted in teal) have been identified correctly. Make corrections as needed using the edit option.

**Copyeditor Changes**

The grey highlights you see in the proof are copyeditor changes. If inappropriate, you can reject them.

**Queries**

These are the queries from the production team. Review and resolve all queries. Corrections cannot be submitted until all queries have been resolved.

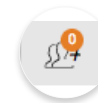

**Layout**

View the repaginated chapter with your changes incorporated by clicking Proof. The Proof view will show your text edits, but not any instructions, attachments, or query responses (these will be addressed in the final publication).

Please also note that the formatting and layout of the Proof will differ from those of the final published product, although the data are the same.

**Editing**

- Edit text with a familiar word processor
- Place comment on graphics, or replace graphics
- Edit tables - row, column or cell
- Edit equations in WYSIWYG or LaTeX mode
- Edit references, funding information and author information

**Collaboration**

Invite collaborators to check and edit the proof. Note that to avoid overlapping corrections, only one person will be able to work on the proof at any given time.

**Graphics**

Annotate the graphics if any change is required, and we will edit or replace them as instructed.

**High-resolution Images**

You can also view the high-resolution version of the image. High-resolution version will be used in the final publication.

Nano-Cellulose Based Composite for Wastewater Treatment

Yashar Aryanfar^{a,i}, Jorge Luis García Alcaraz^b, Ali Keçebaş^c, Shima Vahedi^d, Afsana Mammadova^e, Julio Blanco Fernandez^f, Vahid Rahimi^g, and Mohamed M. Awad^h, ^a Department of Electric Engineering and Computation, Autonomous University of Ciudad Juárez, Juárez, Chihuahua, Mexico; ^b Department of Industrial Engineering and Manufacturing, Autonomous University of Ciudad Juárez, Juárez, Chihuahua, Mexico; ^c Department of Energy Systems Engineering, Technology Faculty, Muğla Sıtkı Koçman University, Muğla, Turkey; ^d Food Science and Safety, Chemistry Faculty, Kaunas University of Technology, Kaunas, Lithuania; ^e Department of Physics, Hohai University, Nanjing, China; ^f Department of Mechanical Engineering, University of La Rioja, Logroño, Spain; ^g Department of Forestry and Ecology, Behbahan Khatam Alanbia University of Technology, Behbahan, Iran; ^h Department of Mechanical Power Engineering, Faculty of Engineering, Mansoura University, Mansoura, Egypt; and ⁱ Thermo-Fluids Research Group, Khazar University, Baku, AZ, Azerbaijan

Introduction	2
Overview of Wastewater Treatment Challenges	2
Introduction to Nano-cellulose-based Composites	3
Properties and Characteristics of Nano-cellulose	4
Types and Sources of Nano-cellulose	4
Structural and Physical Properties of Nano-cellulose	5
Chemical Modification and Functionalization Techniques	5
Applications of Nano-cellulose-based Composites in Wastewater Treatment	6
Adsorption of Organic Pollutants	6
Sorption Mechanisms	7
Enhanced Surface Area and Porosity	7
Selectivity and Regeneration	7
Challenges and Future Perspectives	8
Removal of Heavy Metals and Toxic Compounds	8
Adsorption Mechanisms	9
Surface Modification for Selective Adsorption	9
Synergistic Effects and Composite Design	9
Regeneration and Reusability	9
Challenges and Future Perspectives	9
Case Study: Heavy Metal Removal in Industrial Wastewater	10
Antibacterial and Antimicrobial Properties	10
Antibacterial Mechanisms	10
Antimicrobial Effects on Microbial Contaminants	10
Synergistic Effects and Composite Design	11
Long-term Stability and Biocompatibility	11
Challenges and Future Perspectives	11
Challenges and Future Perspectives	12
Limitations and Drawbacks of Nano-cellulose Composites	12
Strategies for Enhancing Performance and Stability	12
Surface-Modification Techniques	13
Composite Reinforcement	13
Incorporation of Functional Additives	14
Advanced Characterization Methods	15
Potential Applications and Research Directions	15
Adsorption	15
Membrane Filtration	16
Catalysis	16
Sensing	16
Conclusion	16
References	17
